ENGINEERING GLOBAL SKILLS FOR THE FUTURE

SEMTA INTERNATIONAL SKILLS SOLUTIONS IN INDIA

Semta International – providing the power, experience, expertise and British best practice to the world.

Having skilled UK engineering and advanced manufacturing, which is renowned the world over, Semta International is powered up and open for business across continents.

The Semta Group has an unrivalled track record providing a full range of skills related services.

The employer-led education and skills organisation has 60 successful years specialising in

meeting the unique needs of its sectors, delivering high quality, robust, cost effective skills solutions in the UK.

In the last year alone the Semta Group has awarded in excess of 125,000 qualification certificates to learners, partnered with more than 770 training organisations and supported the development of more than 90 new apprenticeship standards and qualifications.

PASSAGE TO INDIA FOR THE NEXT GENERATION OF ENGINEERS

When it comes to training the next generation of engineers the Indian government had no hesitation in utilising Semta International's expertise to provide the knowledge and guidance required to deliver world class skills.

A delegation from Mumbai, attended an intensive six-day Train the Trainer course, organised and run by Semta International, to learn how best to deliver training to help support the next generation of apprentices, graduates and employees entering or already working in engineering careers.

The programme, co-funded by the Indian government and the British

High Commission, was delivered at Semta's headquarters by trainers from Semta's specialist industry awarding organisation EAL, all of whom have backgrounds in industry.

Following successful completion of the course, EAL awarded certificates. The newly qualified trainers will be putting their skills to use by delivering the same programme to other trainers in India.

Sectors we work with include:

aerospace and defense | automotive | composites | construction/building services | electronics | marine | metals | mechanical | rail | space

As part of their learning, the delegation visited an EAL Centre, North Hertfordshire College, which includes an engineering and construction campus in Stevenage – a purpose-built unit which emulates an industrial environment, also run by tutors with industry experience.

This programme is a great example of newly-formed Semta International's blueprint to support skills development worldwide, bringing the group's expertise into one place for all skills needs.

Over the next four years Semta International will be working with the Indian trainers to ensure Continuing Professional Development, delivering additional training and supporting the planned expansion of provision across India.

"We are delighted to be playing our part in helping India upskill its trainers and therefore its workforce through this programme," said John Mountford, Semta International Development Director.

"Increasingly, there is a demand for the skills and high quality qualifications

we can provide beyond the UK as demonstrated by this initiative with our friends from Mumbai - it makes perfect sense for us to make our gold standard of skills provision available to customers overseas."

Semta International adopts the same professional, flexible and accommodating approach to business as its parent company in the UK – with employers and learners at the heart of everything we do – to ensure the vocational education system is fit-for-purpose and delivers the skills required by the advanced manufacturing and engineering sector.

Achievement is formally acknowledged with nationally recognised, high quality specialised qualifications, providing learners with an international passport for their chosen career.

Standards and qualifications are kept under constant review as part of a robust quality assurance approach, making sure technical education keeps pace with industry, tested against international benchmarks.

Mr Mountford added: "We understand the importance of harnessing and developing the talent pipeline today to ensure we are able to provide a skilled workforce for tomorrow's advanced engineering and manufacturing industries.

"Semta is renowned for delivering innovative solutions and programmes to equip employers of all sizes with the skills their businesses need for future growth and competitiveness, allowing employers and individuals the best opportunity to compete on a global stage."

Vandita Tewari Kapoor, Senior Education & Skills Advisor, Prosperity, British High Commission said:

"Semta International is providing India with the very best of British skills solutions. The 'Train the Trainer' project is helping to pass-on contemporary best practice training methods and content to our dedicated team on the ground."
